**LỆNH IF – ELSE, HÀM VÀ HÀM MAIN**  
**PHƯƠNG TRÌNH BẬC NHẤT:**

The image shows a screenshot of the Microsoft Visual Studio IDE. The title bar reads "PythonPTB1 - Microsoft Visual Studio". The menu bar includes "File", "Edit", "View", "Project", "Build", "Debug", "Team", "Tools", "Test", "R Tools", and "Analyze". The toolbar shows icons for file operations and a "Debug" button. The active window is "PythonPTB1.py". The code in the editor is as follows:

```
import math

def InputData():
    a = float(input("Nhap a="))
    b = float(input("Nhap b="))
    return a, b

#-----

def SolveEqual(a,b):
    if a == 0:
        if b == 0:
            print("Vo so nghiem")
        else:
            print("Vo nghiem")
    else:
        x = -b / a
        print("Nghiem x=%.3lf"%x,end = '\n')

#-----

def main():
    a,b = InputData()
    SolveEqual(a,b)

if __name__=="__main__":
    main()
```
